patrickramos.com

I build AI systems that automate and improve business operations: marketing, customer support, reporting and software delivery. Before AI, I spent 15 years shipping products at startups as an engineer, designer and product lead, usually all at once. I like taking something from a sketch to a working product myself.

AI SYSTEMS
Claude Code, Agent SDK, MCP servers, multi-agent workflows, LLM APIs, Zapier

ENGINEERING
TypeScript, React, Next.js, Expo, Node, Python, Postgres, Firebase, AWS, Cloudflare

PRODUCT & DESIGN
Process mapping, wireframes, user testing, design systems, Figma

EXPERIENCE

Blended Sense · Head of Product & Technology — Jan 2024 – Present

Marketplace connecting brands with local videographers; Capital Factory Startup of the Year.

- Rolled out Claude for Teams to 10 seats across engineering, marketing, finance and operations; run it as admin and work with each team on where AI fits their day-to-day.
- Built an MCP server connecting Claude to production Postgres, so every team builds agentic workflows on film session, order and delivery data, replacing manual SQL and Excel work.
- Built a second brain from customer and creative calls and emails; the team uses it with Claude to service customers and videographers with full relationship history.
- Shipped Studio, the internal operations platform (Next.js, AWS, Postgres), and lead engineering AI-first without adding headcount.

Blended Sense · Product & Technology Advisor — Aug 2019 – Dec 2023

Set the roadmap during early growth and managed an outsourced engineering team.

LeagueSquare · Founding Engineer — Jul 2018 – Present

Sports league management and live-streaming platform used by 20+ leagues.

- Built a self-improving software factory: a daily job turns customer feedback, bugs and PostHog sessions into tickets. Agents triage, spec and propose designs, then build and QA. I approve each design and release.
- Built Schedule Genie, a schedule and bracket generator for leagues (launching Dec 2026).
- Automated social media: planning, graphics, reels and captions, all scheduled once I approve.
- Built live streaming and instant clipping on Mux tied to scorekeeping data; now moving to mobile (Expo).

Juntos Consulting LLC · Founder — 2016 – Present

- My LLC for client and product work, home of LeagueSquare since 2026. Websites, CRMs and AI automation for small businesses, e.g. a dance educator's Webflow site, GoHighLevel CRM and Claude MCP connection.

Orchard · Front-End Lead → Senior Product Designer — Oct 2017 – Nov 2020

- Built the underwriting tool and comp-scoring algorithm that priced hundreds of offers a month.
- Hire #4 at a real estate tech company later valued at $1B; core contributor to Atlas, its internal ops tool.

Yodle · Senior Front-End Developer → UX Manager — Jun 2011 – Apr 2016

- Created and maintained the component library used by 100+ designers and engineers; managed 10 front-end developers. Acquired for $342M.

EDUCATION & PRODUCTS

Syracuse University · B.S. Information Management & Technology, 2010
Products: Ditto, a multiplayer party game · **ShowUp**, a group plans app
